ATTACHMENT:

Attach spacer (23) and screw collet adapter (22) onto head. Insert adapter assembly (21) into nose adapter and hand tighten nut. Nose assembly should rotate if stop is properly aligned when tightening. Hold finger at rear of collet bolt (10) and screw nose tip & sleeve assembly down until pintail moves freely in & out.

DISASSEMBLY AND ASSEMBLY

Disassembly:

Loosen jam nut (3) and remove sleeve (2). Unscrew collet (4) which contains jaws (5), follower (6), and spring (7) from collet bolt (10).

Remove screw (12) and guard (14). Remove 2 set screws (13) and push out 2 pivot pins (15) to permit removal of linkage. Shoe bearings (9) and collet bolt (10) will disengage from lever (11).

Remove 4 link pins (17) to disassemble lever (11), links (16), bell crank (18) and drawbolt (20).

Remove guide pin (19) from frame (8). Adapter fitting (21) is secured to frame with loctite and need not be removed unless damaged.

Reassembly:

Reverse the procedure. Linkage, consisting of lever (11), links (16), bell crank (18) and drawbolt (20) should be assembled as a subassembly before inserting lever (11) into shoe bearings (9) and collet bolt (10). This complete subassembly may then be inserted into frame (8) and retained by guide pin (19) and pivot pins (15).
