SIMPLY CLEVER EVERYWHERE.

ONE SYSTEM, MANY APPLICATIONS.

MAXIMUM FREEDOM IN CABLE ROUTING

The FLEXIPASS MULTI is another innovative and practical addition to our proven family of cable management systems. Designed with maximum flexibility and ease of use in mind, the FLEXIPASS MULTI impresses with its new, well-thought-out design.

A special feature of the FLEXIPASS MULTI is the functional separation between the fastening unit and the multifunctional positioning of the roller bends. This solution allows for a high degree of adaptability to a wide variety of installation situations while ensuring secure, stable fastening. The roller bend can be

flexibly aligned and precisely adjusted independently of the fastening.

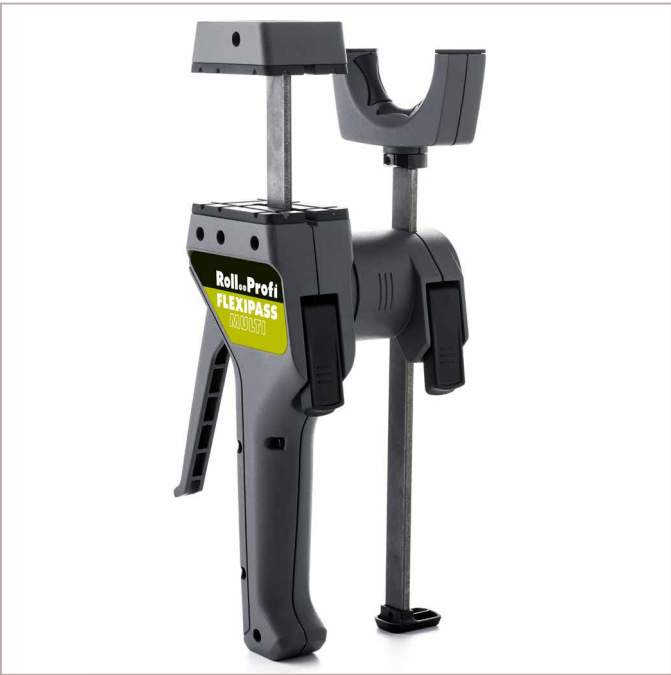

Thanks to its large clamping range and universal adjustment options, the FLEXIPASS MULTI is ideal for laying cables and lines in underfloor areas. Even in confined spaces, such as those often found in duct installations or narrow shafts, the system facilitates orderly and material-friendly cable routing. In addition, the design of the FLEXIPASS MULTI opens up numerous other possible applications.
